4.2 Exponential Smoothing: Aggregate-Daily

2026-04-08

Goal

Apply exponential smoothing to the aggregate-daily Rossmann sales series and evaluate its forecasting performance using a holdout set.

We compare the ETS model to the observed holdout period and report holdout RMSE.

```r
library(tidyverse)
library(forecast)

daily_data <- readr::read_csv(
  "../../03_wrangling/daily_all_clean.csv",
  show_col_types = FALSE
) |>
  dplyr::mutate(
    Date = as.Date(Date)
  ) |>
  dplyr::arrange(Date)

head(daily_data)
```

```
